Disclaimer for "Inside Mount" Wood Shutters

The "Standard Mount" for installing interior wood shutters will be "Outside Mount", with the exception for those windows that are above a kitchen sink, in a master bathroom or windows that have tile, marble or granite that wraps into the window opening. These windows will be installed as "Inside Mount".

Installing wood shutters "Inside Mount" is not recommended for the following reasons:

1. Window Replacement – Many sliding windows are removable from the inside of the home. An inside mount shutter frame may prevent the removal of the sliding window.
2. Warranty – Should a window need to be replaced and an inside mount shutter is obstructing the removal / replacement of the window, it is the homeowner(s) responsibility to pay any cost associated with the shutter removal and re-installation.

I / we acknowledge that I / we have read, understand and accept this document for the purpose of requesting "Inside Mount" shutters in window areas that do not require an "Inside Mount" application as per the standards listed above. Furthermore, I / we acknowledge that I / we have been informed of the reasons that "Inside Mount" shutters are not recommended and that I will assume responsibility for any costs to remove / re-install an inside mount shutter in the event a window that has an inside mount shutter installed needs to be replaced.
