Disclaimer for Luminette ® Privacy Sheers

Luminette ® Privacy Sheers have inherent characteristics that every buyer should know before purchasing.

All Applications

- Maximum Vane Closure Gap (distance between closed, overlapping vanes) is up to ½”.
- Tiltback – The additional weight of the face fabric in front causes the sheer to hang at a slight angle, called “tiltback”. This is an inherent characteristic of the product.
- Return Gap – The distance from the rear end of the treatment to the rear of the installation bracket will be 2”. The distance from the rear of the treatment to the wall will be up to 3”, if spacer blocks are required to install the product.

Split Draw Applications

- Center Gap – Distance between fabric panels when vanes are closed will be up ¼”.
- Shadowing – Shadowing will occur where the 2 panels meet in the middle. Shadowing will be present with the vanes open, more prominent with the vanes in the closed position.

Customer acknowledges they have read and agree to accept the above characteristics as inherent characteristics of Luminette ® Privacy Sheers.
